The decoder displays the decoded video stream on the video wall by directly linking cameras or by stream media forwarding. You can configure what the video wall shows when decoding ends and streaming fails via the Web browser and client software.

The 8 channel decoder features regular and irregular virtual screens configurable to display multiple signal sources and get rid of the restriction of physical screen. It is accessible by 2.4 MP DeepinView camera and by thermal network camera. You can view the temperature measurement, dynamic fire source detection, ship detection and VCA information in live and playback.
