

XProtect Professional

XProtect Professional is IP video management software (VMS) designed for mid-sized security installations covering multiple buildings. It is designed for surveillance systems with more than 48 cameras and can span across multiple servers. Using XProtect Professional, operators can get a complete overview of their security installation, quickly respond to incidents and provide accurate information to first responders. Typical uses could be institutions such as schools, museums, hospitals and production plants that use video surveillance to quickly identify and address incidents.
