INTEGRATES

Helping security teams integrate audio with live video

The combination of the CHeKT Intelligent Video Monitoring platform and Zenitel's IP Audio solutions provides security companies with a pathway to elegantly integrate live interactive audio with live video into a mobile app and professional monitoring centers.

CHeKT's intelligent video monitoring platform provides real-time event alerting from any video surveillance system and delivers the event-based video to remote command centers and system users through a mobile app and command portal, enabling a wide array of time-sensitive response options. By combining security systems, video surveillance, and video AI with live and interactive audio, CHeKT puts operators and users in control of any critical event. Critical video notifications and a controlled response across installations, from small to large, expedites the situational assessment, facilitates accurate decision making, and promotes an effective communication strategy with responding agencies.

Remote broadcasting of live audio commands and messages through the CHeKT portal to high-quality audio solutions from Zenitel, allows command centers and users to go on the offensive when responding to criminal activity. CHeKT and Zenitel proudly announce these unified intelligent audio and video services for mobile apps and command center integrations.

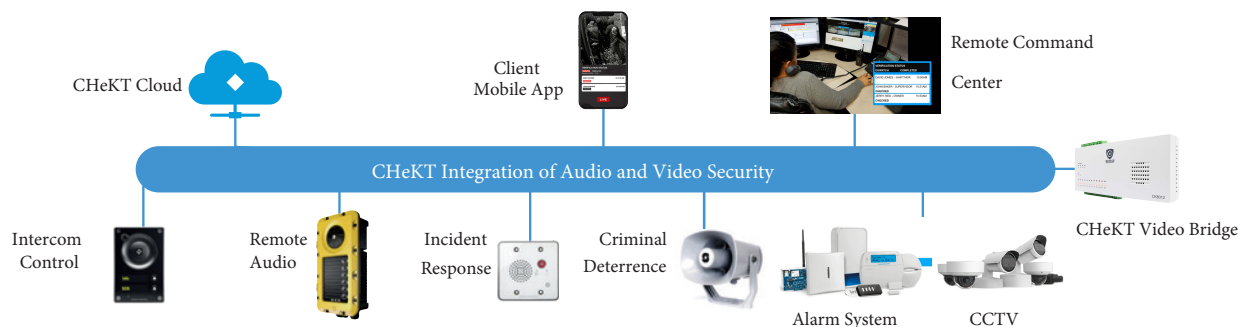

"Three men in dark clothing, you are under live video surveillance. Leave the property immediately. The Police have been dispatched."

Advantages of a Zenitel and CHeKT Integration

- Auto-Discovery of Zenitel audio and video devices integrating into real-time video event monitoring.
- Comprehensive security integration of alarm systems, CCTV and Zenitel audio devices.
- Remote cloud management of Zenitel audio and video devices.
- Integrated video alarm monitoring with remote audio interaction from alarm receiving center control rooms.
- Client controlled mobile app for automating audio commands based on video analytics and AI triggers.
- Client controlled mobile app for real-time active event alerting and remote voice commands to Zenitel audio devices.

System Integration Features	CHeKT
Auto-discovery of Zenitel audio and video devices.	✓
Health Monitoring and Supervision of Zenitel equipment.	✓
Control Room and Command Center Audio Broadcasting to Zenitel audio devices	✓
Customer Mobile App Audio Broadcasting to Zenitel audio devices. (IOS & Andriod)	✓
Remote Cloud Management of Zenitel audio and video devices.	✓
Automated audio announcements with an alarm zone or AI trigger to Zenitel audio devices.	✓
Associate CCTV system cameras with Zenitel audio devices.	✓
Reporting and logging of all audio messages sent to Zenitel audio devices for historical playback.	✓
